In my viewmodel, I am trying to load data in a view model that is a class I created. I created a x:class from my view model that inherits from ViewModelBase. In the x:Bind I tried to use my ViewModelClass but it doesn't work. It seems like the data binding is not allowed from this type. Can someone help me? A: You can use code like this: You should be able to bind to your ViewModelClass type in the above code and it should resolve properly. Q: Dynamic content on a web page that changes with different devices I'm looking for a way to dynamically display content on a web page that changes to suit different devices. The goal is to provide users with a single web page that can be displayed on a desktop, mobile, or tablet device. For 82157476af
